(54) Title: **ACOUSTIC GUITAR ASSEMBLY METHOD AND APPARATUS**

(57) Abstract: A musical instrument, such as an acoustic guitar, and methods and apparatus for assembly of such a musical instrument. The instrument includes at least one major panel, such as a front panel or soundboard, and a side wall. The major panel has a groove or rebate cut into the panel according to a predetermined pattern, which may extend substantially around the periphery of the panel. A first assembly jig is used to support the panel and a second assembly jig is used to hold the side wall in a configuration corresponding to the predetermined pattern of the groove or rebate. The side wall is placed into the second jig such that a free edge of the side wall substantially follows the predetermined pattern. Adhesive is applied and the jigs are brought together such that the free edge of the side wall is inserted into the groove or rebate. A compression force is applied across the jigs to urge the side wall into the groove or rebate. The first assembly jig may also be adapted to support a neck component of the instrument in a predetermined orientation relative to the panel to enable the neck component to be adhered to the panel and to the side wall in that precise orientation. A third assembly jig may then be used to assist in securing a second major panel, such as a back panel, to an edge of the side wall. Methods for accurately fabricating panels for musical instruments using a computer controlled routing machine, such as a CNC machine, are also disclosed. A superior instrument is thereby created in significantly less time than using conventional techniques.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/AU2004/000560

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a)

Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

Claims 1 to 16, 21, 22 and 24 to 28 are all characterised by a musical instrument having a panel with a groove or rebate for receiving a side wall of the instrument. Claims 17 to 20 are concerned with an assembly jig for a musical instrument which positively positions a neck component with a panel of the instrument during assembly. Claim 23 concerns a method of making a panel that is thicker at its edges than its centre. There is no mention of a groove or rebate in claims 17 to 20 or 23. There is therefore no special technical feature linking claims 17 to 20 or 23 with the remaining claims. Unity of invention is thus lacking.

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☒ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
☐ No protest accompanied the payment of additional search fees.

INTERNATIONAL SEARCH REPORT

Information on patent family members

International application No.

PCT/AU2004/000560

This Annex lists the known "A" publication level patent family members relating to the patent documents cited in the above-mentioned international search report. The Australian Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
